

Page 1 - Introduction

This is a sample PDF created for learning PyPDF and LangChain document loaders. It contains five pages with simple text to demonstrate how page extraction works.

Page 2 - Artificial Intelligence

Artificial Intelligence enables machines to perform tasks that normally require human intelligence. Examples include recommendation systems, computer vision, and natural language processing.

Page 3 - Machine Learning

Machine Learning is a subset of AI where models learn patterns from data. Popular algorithms include Linear Regression, Decision Trees, Random Forests, and Neural Networks.

Page 4 - Retrieval-Augmented Generation (RAG)

A RAG pipeline typically includes document loading, text splitting, embeddings, vector databases, retrieval, and LLM inference.

Page 5 - Conclusion

You can now use this document with PyPDFLoader, inspect metadata, access individual pages, split the text into chunks, and build a simple RAG pipeline.
